# **EPOXY EASY FLOW 100**

## **DESCRIPTION AND APPLICATION**

Epoxy LY 100 a 2-component, colourless epoxy resin, designed for general purpose uses in multilayer systems. Allows to obtain a self-leveling flooring 2-3 mm thick in one coat.

#### **APPLICATION**

Designed for applications in dry zones. Usable on wet zones if sand is broadcasted on top. Smooth, glossy finish and easy to clean. Best suited for:

- Industrial flooring.
- Poorly ventilated areas.
- Parking decks.
- Warehouses.

It can also be used as primer for all the multilayer or self-leveling epoxy systems. Different combinations are available depending on the chosen system, fillers and desired pigmentation.

### **TECHNICAL DATA**

INFORMATION OF	N THE PROD	UCT BEFOR	E APPLICATI	ON

	35	25		
Storage	Keep between 10°C and 30°C, in a dry place. Component A may crystallize if stored for protracted periods under certain conditions. If this occurs, it can be restored to its original condition by			

INFORMATION ON THE FINAL PRODUCT		
Final state	Solid film	
Colour	Colourless, slightly yellow	
Hardness (shore)	80D	
Mechanical	Elongation at break: 8%	
properties	Ultimate tensile strength: 23 MPa (FN-ISO 527-3)	

heating it to 70 - 80 °C and stirring it thoroughly.

12 months after manufacturing date.

Solid density	1,10 g/cm3
Tear strength	5,4 N/mm
UV resistance	A slight yellowing, far more reduced than that of other epoxy compositions under sunlight is expected, without loss of mechanical properties.
Chemical resistance	Permanent contact (3 days, 80°C)

Use temperature Stable up to 80°C

## **SURFACE REQUIREMENTS**

In order to achieve a good penetration and bonding, surface must be:

- 1. Flat and levelled (Product is self-levelling)
- 2. Compact and cohesive (pull off test must show a minimum resistance of 1,4 N/mm2).
- 3. Even and regular surface
- 4. Free from cracks and fissures. If any, they must be previously repaired.
- 5. Clean and dry, free of dust, loose particles, oils, organic residues or laitance

#### **TEMPERATURE AND AMBIENTAL CONDITIONS**

Application must be done at surface temperature of  $3^{\circ}$ C above dew point. Air temperature must be above  $5^{\circ}$ C and relative humidity below 80%. Application temperature must be less than  $40^{\circ}$ C. Optimal temperature range is  $10^{\circ}$ C-  $30^{\circ}$ C.

These temperatures must be constant throughout drying process. Application should be done with plenty of air/ventilation.

## **SURFACE PREPARATION**

Concrete surfaces must be previously prepared by sandblasting or any other suitable means. Remove all dust and loose material before priming.

Cut suitable joints along the concrete slab, depending on the total surface to be covered.

Use before

## **EPOXY EASY FLOW 100**

#### **MIXING**

Stir and homogenise thoroughly component A and B using a low-speed stirrer. The mixture turns to a homogenous clear liquid. Do not mix more material than the amount usable within the pot life window.

### **APPLICATION**

To ensure good aggregate binding, the resin amount will depend on several points:

- Grain size
- Dust content in the mineral aggregates
- Degree of absorption of the mineral aggregates.

Depending on these points, the required amount of resin will range from 3% to 10% of the mineral aggregates, by weight.

## **CURING TIME**

For a 500 g/m2 thick application.

Conditions	Dry to touch (h)
35°C, 25%hr	2
23°C, 50% hr	8
23°C, 5% hr	9
7°C, 60°C	>20
-15°C	uncured

#### REAPPLICATION

A second application may be done when the first one is dry to touch, and always within the first 24 hours.

#### **TOOL CLEANING**

Cleaning of tools contaminated with both components must be done with SINDEC xylene.

#### **SAFETY**

Epoxy components are potentially sensitizing. Component B is corrosive. Always follow instruction provided in the Material Safety Data Sheet. As a general rule, suitable skin and eye protection must be worn. This product is intended to be used only for the uses and in the way here described. This product is to be used only by industrial or professional users. It is not suitable for DIY-type uses.

#### **ENVIRONMENTAL PRECAUTIONS**

Empty containers must be handled with the same precautions as if they were full. Treat empty containers as hazardous waste, and transfer them to an authorized waste manager. If the containes still have some material left, do not mix with other product before considering the risk of potential dangerous reactions. Never mix in volumes larger than 5 litres in order to prevent a dangerous heat evolution

#### **OTHER INFORMATION**

The information contained in this DATA SHEET, as well as our advice, both written as verbal or provided through testing, are based on our experience, and they do not constitute any product guarantee for the installer, who must consider them as simple information.

We recommend to study deeply all information provided before proceeding to the use or application of any of our products, and strongly advise to conduct tests "on-site" in order to determine their convenience for a specific project.

Our recommendations do not exempt of the obligation of installers to deeply study the right application method for these systems before use, as well as to conduct as many preliminary tests as possible should any doubt arise. The application, use and processing of our products are beyond our control, and therefore under the exclusive responsibility of the installer. In consequence, the installer will be the only responsible of any damage derived from the partial or total in-observation of our indications, and in general, of the inappropriate use or application of these materials.

This data sheet supersedes previous versions.
